

KOMODO DRAGONS

Komodo Dragon

Habitat

Komodo dragon lives in Tropical forests in Indonesias Lesser Sunda Islands.

Prey

Komodo dragons eat almost anything. #They eat water buffalo, deer, pigs, smaller komodo dragons and occasionally humans.

How they catch prey?

When hunting, komodo dragons rely on camouflage and patience by lying in bushes or tall grass until a victim passes by. They pounce on their prey with their powerful legs and sharp claws and sharp teeth. If the komodo dragon digs its teeth into its prey they'll die in hour from the poison from their teeth.
