

# LEOPARDS

The speed of Leopards is 58km and that is their max speed. Leopards can live up to 12-17 years max. Leopards are light in colour and have dark spots on their fur. They live in Sub-Saharan deserts. The average weight of Leopards is 40 to 50 pounds. Leopards can leap up to 20 meters. Leopards are bigger than a house cat but leopards are the smallest cat in the larger cat family. Leopards are carnivores which means they eat meat. They eat fish, reptiles, birds, and mammals. "Be true to your inner Leopard"

# Snow Leopards

They eat deer and small mammals. They can run up to 30 to 40km. They live in northern and central Asia. It is well known that they have adapted to the freezing cold. They can kill almost double their body weight. Their length is 50 to 150cm which includes their tail.

This is the end! Thank you for reading my report on predators.
