

LEOPARDS

LEOPARDS

The rarest leopard is the amur leopard. The male leopards are about 31kg and female leopards are 27kg .

Leopards are known as cats of the night.

A Leopards lifespan is 12 to 17 years. They are carnivores and strong predators. Their maximum running speed is 58km/h. It's scientific name is panthera pardus. Leopards are good at camouflage because they are adaptive animals. They are not picky eaters.

HABITATS

Leopards live in deserts and rainforests. There are lots of different types of leopards such as snow leopards, amur leopards and lots more.

They can be found in Africa, Asia, Russia and India.

Leopards are afraid of Humans, Hyenas and electric fences.

They are solitary animals and they are yellow and black in colour. Leopards are very secretive animals.
